# 7-Point Seating Assessment

EXCLUSIVELY AT DIVANO

## THE CORRECT SEAT DEPTH FOR COMFORT

If the depth of the seat is correct the calf should gently kiss the leg rest or allow for a flat hand to be placed between the calf and leg rest.

## HIP POSITION

Bottom fits into the back of the seat.

## THE RIGHT SEAT HEIGHT FOR COMFORT

If the seat height is correct the feet will be flat on the floor.

The entire upper leg should also be fully supported so that the knee almost forms a right angle.

## NECK & HEAD SUPPORT

When the neck is supported correctly the head is not forced forward or too high above the back of the chair.

## LOWER BACK SUPPORT

The lumbar area: the natural curve in the back is supported by the chair.

## ARM POSITION

Elbows to fingers must be in contact with the arm of the chair.

The forearm should be supported with the shoulders in their natural resting position.

## GETTING THE WIDTH RIGHT

The correct width is vital to help spread the weight across the seat.

It provides pelvic stability and prevents leaning to one side.
